

## **Aviation Partners Hawker 800/800XP Winglet Program Update**

Aviation Partners is here at EBACE at the top of its game with record sales of Blended Winglet Systems for the Hawker 800 family. Orders for more than 100 Hawker 800/800XP Blended Winglet Systems confirm that Blended Winglets are quickly becoming the standard for the classic airframe. A Blended Winglet equipped Hawker benefits from a range boost of up to 180 nm, a 2000 ft higher initial cruise altitude, a certified second segment climb improvement, and reduced fuel burn / carbon emissions.

Market interest remains strong for Hawker 800 and 800XP Blended Winglet System Retrofits, redesignating these popular business jets as 800SPs and 800XP2s. Installations are presently available at a number of facilities in North America, but due to increased inquiries from non-US operators Aviation Partners is finalizing negotiations with two overseas facilities.

For more information on upgrading your business aircraft with Aviation Partners with revolutionary, range extending, Blended Winglet Technology contact Gary Dunn during EBACE in Geneva May 20-22nd (display area #1060 or cell: 206-310-2904).
